SKILLS

Product & growth

Product strategy · PRDs · Roadmap prioritisation · Marketplace design · Pricing · Unit economics · Cohort segmentation · Funnel analysis · CAC and ROAS · Attribution

GTM & commercial

Go-to-market · Partnerships · Contract negotiation · Enterprise accounts (India, Saudi Arabia) · B2B SaaS · FMCG distribution · QSR · Logistics · WhatsApp Business API

Technical

SQL / PostgreSQL · Metabase · Python · TypeScript · React · Jira · Release management · AI coding assistants · Agent systems (Claude Agent SDK, MCP) · LLM cost governance

PROJECTS

MilkoReach — ordering app for a partner brand

2026 · built with an AI coding assistant
Retailers near the brand's distributors were not ordering. Built the app in an evening; real purchase orders two days later. **17 days idea to first delivery, 226 distributors mapped.**

WhatsApp sales agent, first working version

1 Jul 2026 · one sitting
Request handling, prompts, messaging, auth and a policy layer, with its handover doc, in one sitting. **Reported ₹11,690 of revenue it actually caused** where a looser definition allowed ₹3,98,065.

Trial-combo storefront

2026 · failed experiment
A storefront for low-price trial packs of unknown brands, no install, no verification before checkout. Built end to end; **produced no meaningful orders.**

SUMMARY

Three years in Indian food and retail commerce, on both the merchant and the distribution side. Ran product, growth and engineering delivery for a team of 20 through a twenty-six-fold rise in monthly orders, the model change that followed when courier economics broke, and an AI team that put twenty systems into production. I name the number before we build, then query it afterwards and report what it says.

WORK EXPERIENCE

Product Manager | Badho Technologies, Gurugram

Oct 2025 – Sep 2026

- Product, growth, engineering delivery, QA and the AI pod across a team of 20. **Designed the contribution-margin cascade the marketplace ran on; CM1 –26% → +11.5% of order value, positive from Jul 2026.** Two model changes in six months. 242 releases of three apps; #1 spec author, 489 of 1,585 tickets. Company wound down Sep 2026.
- Badho Wholesale (JIT pivot) — commission marketplace → own-warehouse distributor**
 - Named the blocker in numbers (three per-brand minimums on one cart), then owned the operating model: warehouse and software specification, minimums replaced by a flat delivery fee. Plan to first delivery **12 days** (build started 29 Jul); of 81 orders in the 8 active days, **43 were packed and never dispatched** and only **6 of 19 own-fleet attempts arrived.**
- Unit economics — chose the metric, built the cascade, moved it**
 - No COGS to cascade from, so built it top-down: commission – discounts – delivery – marketing = CM1; support/brand-success = CM2; tech = CM3. Marketing sits above the line deliberately, since LTV could not amortise it. **CM1 –26.3% → +11.5% of order value**, in sequence: delivery **46% → <1%**, commission taken **12.7% → 19.4%**, discounts to 15.1% to buy growth then cut to **5.3%**. Return freight was **107% of the net loss**; specified 34 of 42 fulfilment features for **RTO 42.6% → 21.4%** and fulfilment **22% → 64%** on 4x volume.
- WhatsApp channel — built, run and measured honestly**
 - Campaigns at 25k–62k recipients with per-send cost control, a seven-cohort model over 1.17M buyers, templates authored under my own name, vendor migrated in-house (₹0.145 → ₹0.115/msg); **₹9.60 per app install** across 29,172 buyers on same-day attribution. Recommended stopping the spend when July ROAS came in at 1.12x against a 13% take rate.
- Buyer app — made ordering easier, mostly by removing things**
 - Removed the signup form and the OTP tap: registration after phone verification **30% → 94%**, mid-form abandonment 21,064 per three weeks → 9. Language from shop location (wrong-language apps in non-Hindi states **38–46% → <1%**). Cart reminders, home tabs, a free-gift engine, a support tab with a named RM for **1.47M buyers** after finding **89% of open carts sat below the minimum**. Installs reaching a first order still fell, 2.52% → 1.43%.
- Pricing and rewards — four experiments, then the query**
 - Cart coupons, item-level quantity discounts, ₹1 trial products, a funded base-price cut. Queried after: coupon usage **6.9% → 36.6%** of orders with conversion flat; a **37-minute config change cut item-coupon spend 45.7%** with no order loss; ₹1 first orders repeated **2–8 pts lower**. Built the discount-audit dashboard myself; its anomaly band surfaced **~₹81k** of out-of-spec discount.
- DAAS — delivery as a service, sold to the distributors on our own marketplace**
 - Joint product owner: invoice photo to a 10–50 drop list, address locked per shop and geo-fence verified, routing without a helper in the truck, two-party handover codes, cash to the distributor's bank the same day. **Truck-days a month 137 to 634, 17,174 deliveries** to 7,363 shops, **₹18.95 Cr of goods** and ₹21.5 L of fees for 60 paying distributors.
- AI programme and search — program-managed and specified**
 - Owned eleven epics for the four-person pod that shipped **20 production systems**; red-teamed the sales agent before launch; mandated model budget alerts. Specified vernacular search: **699,684 learned synonyms** on 32,536 roots.

Product Manager, Founder's Office (part-time) | ONO Suite / DailyKit, Gurugram

Jul 2024 – Sep 2026 · intern
Jan – Jun 2024

- Restaurant technology — self-ordering kiosks, ordering apps, POS integrations — for QSR chains in India and Saudi Arabia.
 - Wrote the company price list (subscription against an ownership buyout, per kiosk / store / chain) and commercials for seven brands; registered POS partnerships with GoFrugal and Petpooja. Owned the **Herfy** Saudi account single-handed: 79 kiosks, three renewals, a price rise closed conceding six of seven legal redlines, a withholding-tax dispute resolved at a 17.65% gross-up.
 - Product manager for DOKA**, a bespoke ordering app for a nine-branch Riyadh bakery: dine-in, take-away and scheduled delivery, plus a **five-step cake configurator** (shape, flavour, colour, decoration, message) redrawn from **three angles** with live pricing. Cold-pitched it with a clickable prototype, priced through three rounds, signed at **~\$7,000** under Saudi law, delivered to Apple approval with one developer.
 - Specified kiosk features — the offer-engine requirement (₹1-with-purchase, buy-one-get-N scaling) — and wrote the payload and webhook contract handed to POS vendors (POSIST, Petpooja, GoFrugal, Rista).

Earlier — engineering

2021 – Jun 2024

- Founding Software Engineer, Taxian** (Oct 2023 – Jun 2024): shipped a Flutter app to the Play Store reaching 500+ active users; led a team of five. Before that, full-stack and mobile development for clients in the USA, Canada and India; project team lead at OneAll Digital.
