SKILLS

Product & growth

Product strategy · PRDs · Roadmap

prioritisation · Marketplace design · Pricing ·

Unit economics · Cohort segmentation ·

Funnel analysis · CAC and ROAS · Attribution

GTM & commercial

Go-to-market · Partnerships · Contract

negotiation · Enterprise accounts (India,

Saudi Arabia) · B2B SaaS · FMCG

distribution · QSR · Logistics · WhatsApp

Business API

Technical

SQL / PostgreSQL · Metabase · Python ·

TypeScript · React · Jira · Release

management · AI coding assistants · Agent

systems (Claude Agent SDK, MCP) · LLM

cost governance

PROJECTS

MilkoReach — ordering app for a partner brand

2026 · built with an AI coding assistant

Retailers near the brand's distributors were not ordering. Built the app in an evening; real purchase orders two days later. **17 days idea to first delivery, 226 distributors mapped.**

WhatsApp sales agent, first working version

1 Jul 2026 · one sitting

Request handling, prompts, messaging, auth and a policy layer, with its handover doc, in one sitting. **Reported ₹11,690 of revenue it actually caused** where a looser definition allowed ₹3,98,065.

Trial-combo storefront

2026 · failed experiment

A storefront for low-price trial packs of unknown brands, no install, no verification before checkout. Built end to end; **produced no meaningful orders.**

SUMMARY

Three years in Indian food and retail commerce, on both the merchant and the distribution side. Ran product, growth and engineering delivery for a team of 20 through a twenty-six-fold rise in monthly orders, the model change that followed when courier economics broke, and an AI team that put twenty systems into production. I name the number before we build, then query it afterwards and report what it says.

WORK EXPERIENCE

Product Manager | Badho Technologies, Gurugram

Oct 2025 – Sep 2026

- Product, growth, engineering delivery, QA and the AI pod across a team of 20. Monthly orders 219 → 5,784 over the tenure; 242 releases of three apps from one monorepo; #1 spec author, 489 of 1,585 tickets. Company wound down Sep 2026.

Badho Wholesale (JIT pivot) — commission marketplace → own-warehouse distributor

- Named the blocker in numbers (three per-brand minimums on one cart), then owned the operating model: warehouse and software specification, minimums replaced by a flat delivery fee. **First order live in 12 days**; of 81 orders in the 8 days before closure, **43 were packed and never dispatched.**

Fulfilment economics — freight legibility, automated courier claims, a returns stack

- Two in five courier orders came back and every order lost money. Specified 34 of 42 fulfilment features: **return-to-origin 42.6% → 21.4%**, contribution per order **–₹196 → +₹126**, median delivery 10.2 → 6.1 days, p90 28.2 → 10.1; return freight was **107% of the net loss.**

WhatsApp channel — built, run and measured honestly

- Campaigns at 25k–62k recipients with per-send cost control, a seven-cohort model over 1.17M buyers, templates authored under my own name, vendor migrated in-house (₹0.145 → ₹0.115/msg); **₹9.60 per app install** across 29,172 buyers on same-day attribution. Recommended stopping the spend when July ROAS came in at 1.12x against a 13% take rate.

Buyer app — made ordering easier, mostly by removing things

- Removed the signup form and the OTP tap, set language from the shop location, cut the first-order minimum to ₹300, and specified cart reminders, home tabs, a free-gifts engine, a support tab with a named relationship manager for **1.47M buyers**, and the 31-reason notification programme after finding **89% of open carts sat below the minimum**. Orders a week went 322 to 2,099 at the June peak; a team effort, stated as such.

Pricing and rewards — four experiments, then the query

- Cart coupons, item-level quantity discounts, ₹1 trial products and a funded base-price cut. Queried from production afterwards: coupon usage **2.9% to 29.5%** of orders with conversion flat; gift-scheme qualifiers re-ordered next month at **50% against 19%**; a ₹4.57 Cr free-credit run was spent by **0.06%** of the buyers who got it; ₹1 first orders repeated 2–8 points less.

DAAS — delivery as a service, sold to the distributors on our own marketplace

- Joint product owner: invoice photo to a 10–50 drop list, address locked per shop and geo-fence verified, routing without a helper in the truck, two-party handover codes, cash to the distributor's bank the same day. **Truck-days a month 137 to 634, 17,174 deliveries** to 7,363 shops, **₹18.95 Cr of goods** and ₹21.5 L of fees for 60 paying distributors.

AI programme and search — program-managed and specified

- Owned eleven epics for the four-person pod that shipped **20 production systems**; red-teamed the sales agent before launch; mandated model budget alerts. Specified vernacular search: **699,684 learned synonyms** on 32,536 roots.

Product Manager, Founder's Office (part-time) | ONO

Jul 2024 – Sep 2026 · intern

Suite / DailyKit, Gurugram

Jan – Jun 2024

- Restaurant technology — self-ordering kiosks, ordering apps, POS integrations — for QSR chains in India and Saudi Arabia.

- Wrote the company price list (subscription against an ownership buyout, per kiosk / store / chain) and commercials for seven brands; registered POS partnerships with GoFrugal and Petpooja. Owned the **Herfy** Saudi account single-handed: 79 kiosks, three renewals, a price rise closed conceding six of seven legal redlines, a withholding-tax dispute resolved at a 17.65% gross-up.

- Product manager for DOKA**, a bespoke ordering app for a nine-branch Riyadh bakery: two order flows, dine in, take away, scheduled delivery, and a **five-step cake configurator** (shape, flavour, colour, decoration, message on the cake) redrawn from **three angles** with live pricing, colour rendered dynamically instead of one image per combination. Cold-pitched it with a prototype, priced through three rounds, signed at **~\$7,000** under Saudi law, mapped a **215-item** menu into their POS, and delivered to iOS release approval with one developer.

- Specified kiosk features — the offer-engine requirement (₹1-with-purchase, buy-one-get-N scaling) — and wrote the payload and webhook contract handed to POS vendors (POSIST, Petpooja, GoFrugal, Rista).

Earlier — engineering

2021 – Jun 2024

- Founding Software Engineer, Taxian** (Oct 2023 – Jun 2024): shipped a Flutter app to the Play Store reaching 500+ active users; led a team of five. Before that, full-stack and mobile development for clients in the USA, Canada and India; project team lead at OneAll Digital.
