SUMMARY

Product Manager with 3 years across growth, strategy and go-to-market in Indian B2B commerce. Defined the contribution-margin model a marketplace ran on and took CM1 from -26% to +11.5% of order value in six months; lifted registration completion from 30% to 94%; built a WhatsApp acquisition channel to 29,172 buyers at ₹9.60 per install; owned the operating model for a business-model pivot delivered in 12 days. Writes the spec, runs the release, queries the result, and builds the product when nobody else can.

-26% → +11.5% Contribution margin (CM1)	30% → 94% Registration completion	₹9.60 Cost per app install	42.6% → 21.4% Return-to-origin rate	137 → 634 Truck-days / month

EXPERIENCE

Product Manager — Growth, PLG & Strategy | Badho Technologies, Gurugram Oct 2025 – Sep 2026

- Designed the CM1/CM2/CM3 cascade for a B2B marketplace and took **CM1 from -26% to +11.5% of order value** in six months — delivery cost 46% → under 1%, discounts 15.1% → 5.3%, commission taken 12.7% → 19.4%.
- Drove the fulfilment programme: return-to-origin **42.6% → 21.4%**, fulfilment **22% → 64%** on 4x volume; specified 34 of 42 fulfilment features incl. automated courier weight-claim recovery (378 claims in 24 h).
- Owined the operating model for the pivot to own-warehouse distribution — warehouse and software spec, buyer mechanics, cutover: **written plan to first delivery in 12 days**; carts per day 4.5 → 45.5 once per-brand minimums came off.
- Ran the buyer-app growth roadmap: **registration completion 30% → 94%** by removing the signup form and OTP step; **99% of order flow onto a unified multi-seller cart in one week**, orders per active buyer +41%.
- Built the WhatsApp acquisition channel from zero — an audience model over 1.17 M buyers and two message-cost decisions worth ~7x and 21% — to **29,172 buyers at ₹9.60 per install**; found and fixed the attribution error that hid 78% of the channel's buyers.
- Shipped and measured four pricing experiments: item-level quantity coupons lifted **AOV +10.5% at ~8x on the incremental discount rupee**; a 37-minute config change cut coupon spend 45.7% with orders flat; built the discount-audit dashboard.
- Measured every retention scheme against repeat orders — gift qualifiers re-ordered at **50% vs 19%**; a ₹4.57 Cr credit run was used by 0.06%; referrals activated 6.7x better on 3.9x less GMV per signup — and re-pointed the budget.
- Joint product owner of a delivery-as-a-service business sold to our own distributors — truck-day pricing, invoice-photo order entry, two-party handover, same-day cash: **137 → 634 truck-days a month, 17,174 deliveries, ₹18.95 Cr of goods moved**.
- Ran the release gate for three apps from one monorepo — **242 versions, 805 of 1,613 pull requests merged, 204 of 204 release merges**, monthly bug inflow 114 → near zero — and wrote the most specifications in the company: **489 of 1,585 tickets, 192 requirement documents**; program-managed 11 epics for the four-person AI team that put 20 systems live.

Product Manager, Strategy & Growth | ONO Suite, Gurugram Jul 2024 – Oct 2025

- Ran go-to-market: a funnel of **118 parent restaurant chains across seven cities** reviewed weekly, **57 companies met in 2024**, 37 introductory calls booked onto the founder's calendar, 26 POS and hardware partnership conversations, 11 sales channels tested.
- Authored the pricing architecture — subscription vs ownership buyout, priced per kiosk, per store and per chain — and the commercials for seven restaurant brands including Herfy, Mad Over Donuts and Pizza Wings.
- Ran the Herfy account (Saudi Arabia) single-handed through Aug 2026: **79 live kiosks, three consecutive renewals**, a price rise negotiated on absolute change, a 15% withholding-tax dispute settled at a 17.65% gross-up.
- Product-managed DOKA Bakery House's ordering app (Riyadh, nine branches) from a prototype I pitched to **App Store approval**: two order flows, a five-step design-your-own-cake configurator with live pricing, scheduled delivery, card and Apple Pay, kitchen-fed tracking, Arabic and English.
- Product-managed the self-ordering kiosk — offer engine, dine-in/take-away flows, WhatsApp e-bills, loyalty and coupons, payment-delay enforcement, four POS integrations — and produced the weekly client report on **₹4.19 Cr of kiosk sales across 19 Taco Bell stores and 34 kiosks**.

Earlier | ONO Suite · Taxian · goblaq (US) · Quonectic (Canada) · OneAll Digital, Delhi NCR / remote 2021 – Jun 2024

- Growth & Partnerships Intern, ONO Suite** (Jan–Jun 2024, full-time): outbound to 60+ restaurant and retail brands; managed three interns. **Founding Software Engineer, Taxian** (Oct 2023–Jun 2024): shipped a Flutter app to the Play Store (500+ users), led five. **Software Developer**, internships and freelance (2021–23); project team lead at OneAll Digital.

SKILLS

Product: Product Strategy, Product Requirements (PRD), Roadmap Prioritisation, Release Management, Experiment Design, Marketplace Mechanics, Agile
Growth & Analytics: Growth Strategy, Product-Led Growth (PLG), Unit Economics, Pricing & Incentives, Cohort & Retention Analysis, Funnel Analysis, Attribution & Incrementality, CAC / ROAS, SQL / PostgreSQL, Metabase
Go-to-Market: Go-to-Market Strategy, B2B SaaS, Partnerships, Contract Negotiation, Enterprise Accounts (India, Saudi Arabia), FMCG Distribution, Logistics, WhatsApp Business API, Lifecycle Messaging
Technical: TypeScript, React, Python, AI Coding Assistants, Agent Systems (Claude Agent SDK, MCP)

PROJECTS

MilkoReach — direct-to-retailer ordering app — Built with an AI coding assistant in one evening; real purchase orders two days later. 17 days idea to first delivery; growth verified incremental (52 of 53 retailers dormant pre-launch).
WhatsApp sales agent — first working version — Request handling, prompts, messaging, auth and a policy layer — 3,127 lines with a handover document in one sitting; productionised by the AI team.

EDUCATION

B.Tech, Computer Science | Indian Institute of Information Technology (IIIT) Sonepat — mentor institute: IIT Delhi | 2020 – 2024 · GPA 9.415 / 10
