## SKILLS

### Product & growth

Product strategy · PRDs · Roadmap prioritisation · Marketplace design · Pricing · Unit economics · Cohort segmentation · Funnel analysis · CAC and ROAS · Attribution

### GTM & commercial

Go-to-market · Partnerships · Contract negotiation · Enterprise accounts (India, Saudi Arabia) · B2B SaaS · FMCG distribution · QSR · Logistics · WhatsApp Business API

### Technical

SQL / PostgreSQL · Metabase · Python · TypeScript · React · Jira · Release management · AI coding assistants · Agent systems (Claude Agent SDK, MCP) · LLM cost governance

## PROJECTS

### MilkoReach — ordering app for a partner brand

2026 · built with an AI coding assistant  
Retailers near Kapila's distributors were not ordering. Built an assisted-ordering app in an evening; real purchase orders two days later. **Idea to first delivery in 17 days; 226 distributors mapped.**

### WhatsApp sales agent, first working version

1 Jul 2026 · one sitting  
Orchestrator, prompt layer, messaging, auth and policy engine, with a handover document. The AI pod made it production-grade from day three. **Reported ₹11,690 causal revenue** where a looser definition allowed ₹3,98,065.

### Trial-combo storefront

2026 · failed experiment  
A no-install, no-OTP storefront for low-price trial packs of unknown brands. Built end to end; **produced no meaningful orders**. Kept because the friction argument is sound and the result is honest.

## SUMMARY

Three years in Indian food and retail commerce, on both the merchant and the distribution side. Ran product, growth and engineering delivery for a team of 20 through a twenty-six-fold ramp in monthly orders, the pivot that followed when the courier model broke on unit economics, and an AI pod that put twenty agent systems into production. I define the value metric before we build, and I report the number that survives an audit.

## WORK EXPERIENCE

### Product Manager | Badho Technologies, Gurugram

Oct 2025 – Sep 2026

- Product, growth, engineering delivery, QA and the AI pod across a team of 20. Monthly orders 219 → 5,784 over the tenure; 242 releases of three apps from one monorepo; #1 spec author, 489 of 1,585 tickets. Company wound down Sep 2026.
- Badho Wholesale (JIT pivot) — commission marketplace → own-warehouse distributor**
  - Named the retention constraint in numbers (three per-brand minimums on one cart), then owned the operating model: warehouse and software specification, per-brand minimums replaced by a flat ₹75 fee waived above ₹500. **First order live in 12 days**; daily carts in the launch cities 4.5 → 45.5.
- Fulfilment economics — freight legibility, automated courier claims, a returns stack**
  - Two in five courier orders came back and every order lost money. Specified 34 of 42 fulfilment features: **return-to-origin 42.6% → 21.4%**, contribution per order **–₹196 → +₹36** (company P&L), median delivery 10.2 → 6.1 days, p90 28.2 → 10.1.
- WhatsApp channel — built, run and measured honestly**
  - Campaigns at 25k–62k recipients with per-send cost control, a seven-cohort model over 1.17M buyers, templates authored under my own name, vendor migrated in-house (₹0.145 → ₹0.115/msg); **₹9.60 per app install** across 29,172 buyers on same-day attribution. Recommended stopping the spend when July ROAS came in at 1.12× against a 13% take rate.
- Buyer-app product-led growth — subtraction first**
  - Removed the signup form and OTP tap, derived language from location, cut the first-order MOV to ₹300, specified cart nudges, a free-gifts engine and the 31-use-case notification programme after finding **89% of live carts sat below MOV**. DAU peaked ~9.8k and orders hit 250+/day in June (a team effort, stated as such).
- Delivery-as-a-Service (MOVE IT) — sold to the distributors on our own marketplace**
  - Joint product owner: OCR bill intake, two-party OTP handover, three-hop cash custody, pricing by vehicle class. Trips **259 → 438** quarter on quarter; seller businesses 4 → 43; ~4,100 bookings in 2026 at 73% completion.
- AI programme and search — program-managed and specified**
  - Owned eleven epics for the four-person pod that shipped **20 production systems**; red-teamed the sales agent before launch; mandated model budget alerts. Specified vernacular search: **699,684 learned synonyms** on 32,536 roots.

### Product Manager, Founder's Office (part-time) | ONO Suite / DailyKit, Gurugram

Jul 2024 – Sep 2026 · intern  
Jan – Jun 2024

- Restaurant technology — self-ordering kiosks, ordering apps, POS integrations — for QSR chains in India and Saudi Arabia.
  - Authored the company pricing architecture (subscription vs ownership buyout, per kiosk / store / chain) and commercials for seven QSR brands; SPOC for a **34-kiosk Taco Bell India** estate with weekly client reporting.
  - Owned the **Herfy** Saudi account single-handed: 79 live kiosks, three renewals, a price rise closed while conceding six of seven legal redlines, a withholding-tax dispute resolved at a 17.65% gross-up.
  - Cold-pitched **DOKA** (Riyadh, nine branches) with a Figma prototype, priced the scope through three rounds, signed at ~\$7,000 under Saudi law and delivered to iOS release approval with a two-person team — five-step cake configurator, 215-SKU POS mapping, weekly client reporting.
  - Registered formal partnerships with GoFrugal and Petpooja; working relationships with Reelo, Razorpay, checkout.com, QueueBuster.

### Earlier — engineering

2021 – Jun 2024

- Founding Software Engineer, Taxian** (Oct 2023 – Jun 2024): shipped a Flutter app to the Play Store reaching 500+ active users; led a team of five. Before that, full-stack and mobile development for clients in the USA, Canada and India; project team lead at OneAll Digital.
